**15283**

Total articles / notices

**747**

From RSS feeds

**5350**

From TED procurement

**9186**

From Google News

**14/14**

Verticals with data

---

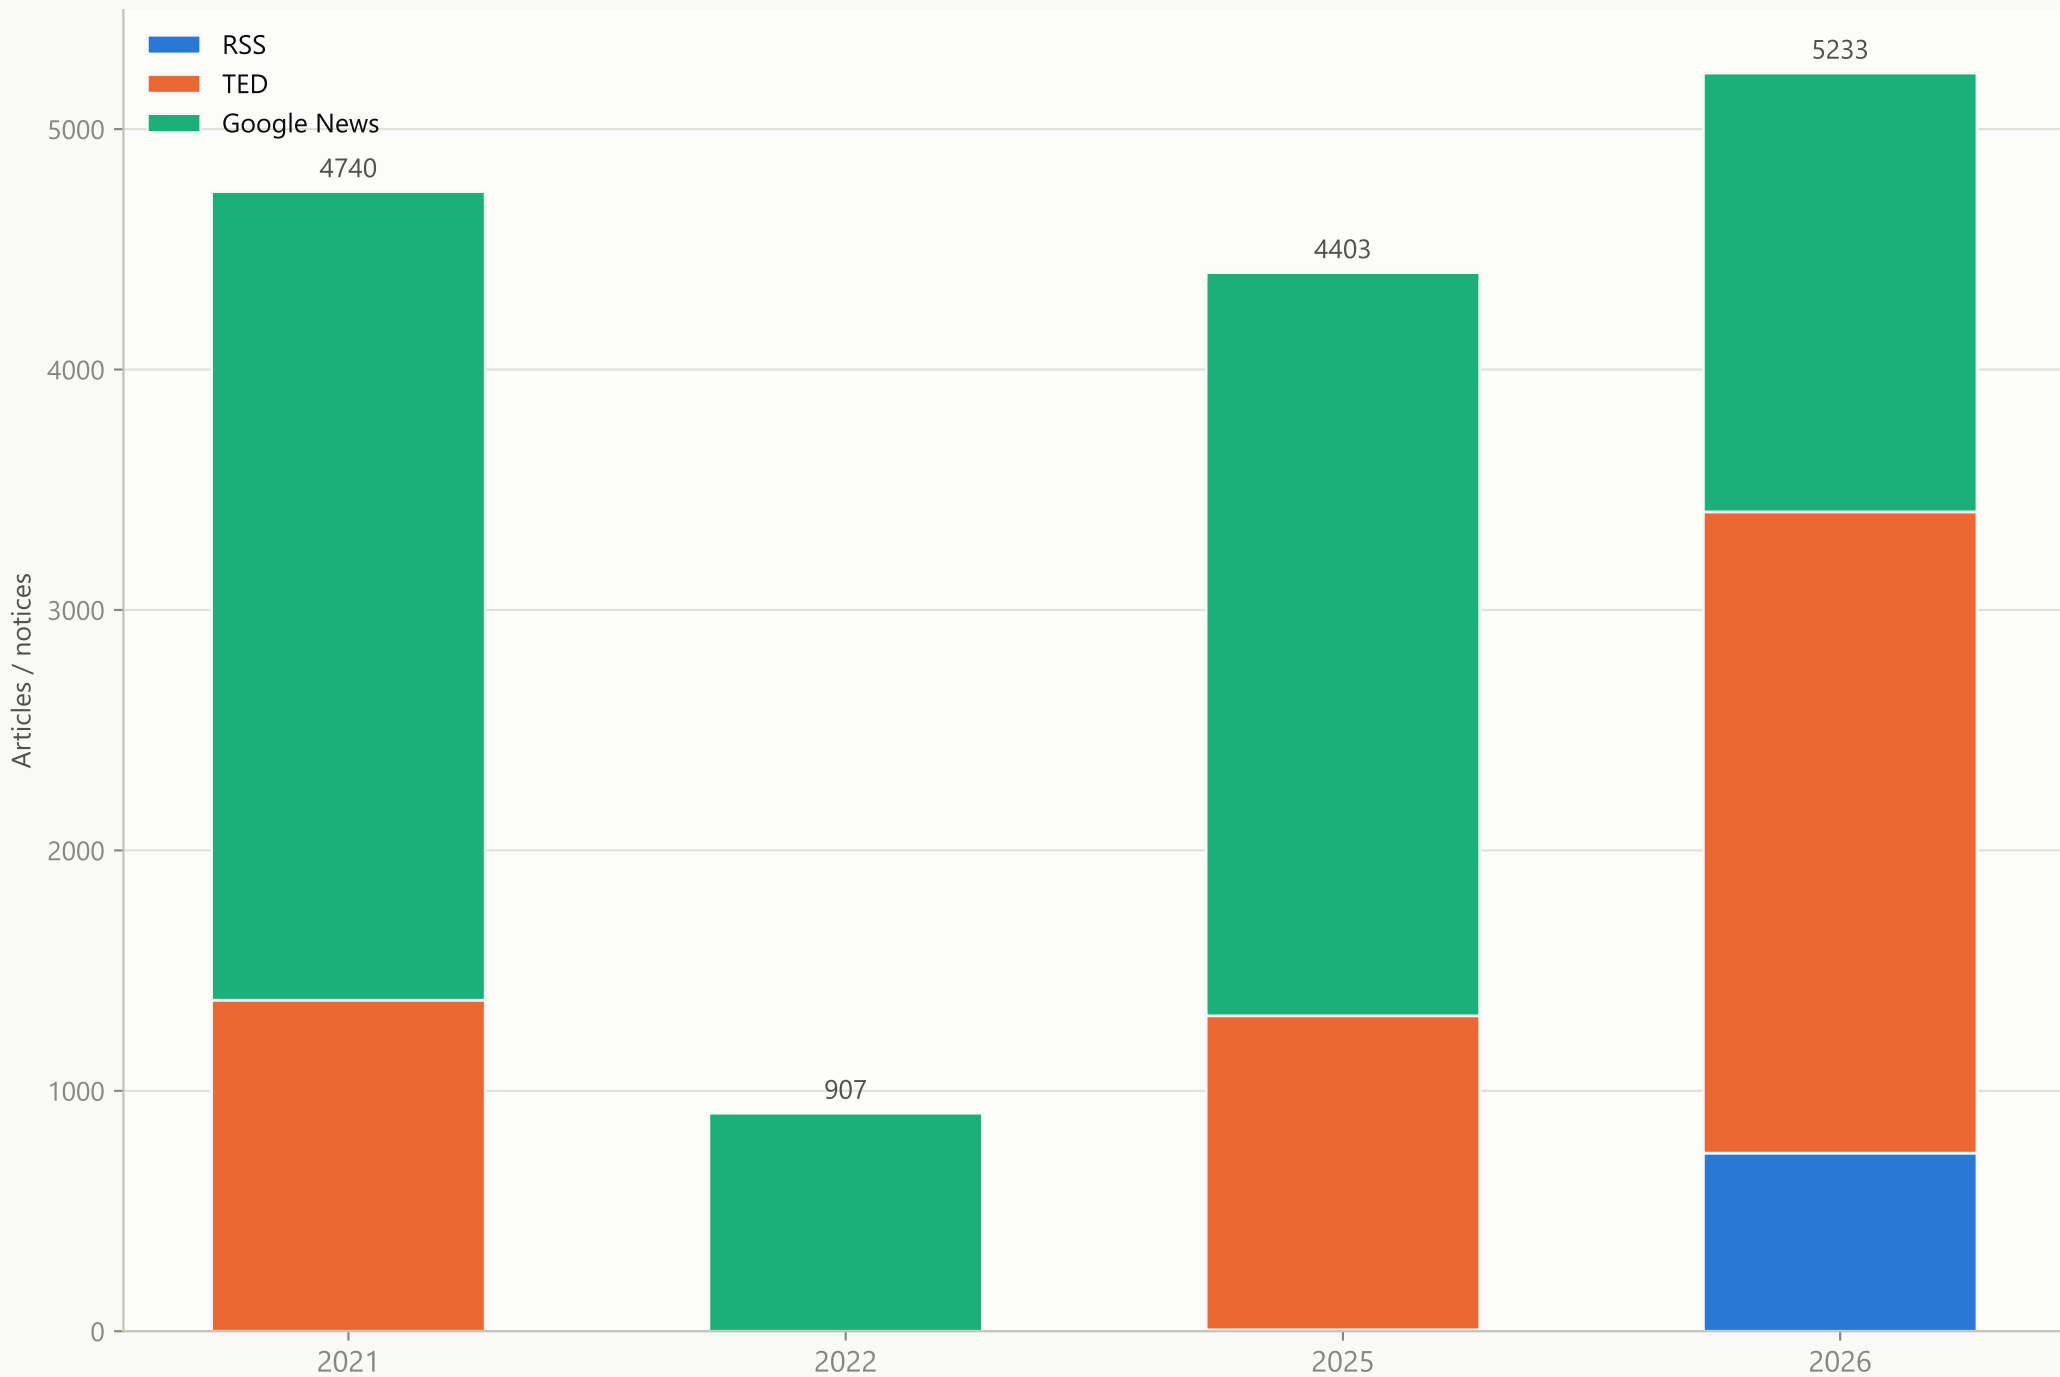

Sources: 26 curated RSS feeds; TED (EU public procurement, active + ~1y-ago + ~5y-ago per vertical); Google News RSS (33 vertical/window queries, recent + ~1y-ago + ~5y-ago) — all 14 verticals.

RSS feeds currently unreachable (logged, not fatal): TVNewsCheck, Healthcare IT News (both return HTTP 403 / Cloudflare bot protection).

Confidence is a flat per-source trust signal: RSS and TED are "good", Google News is "mid" (keyword-search noise — see `dark_corner.md`). Not filtered, just tagged — weight accordingly downstream.

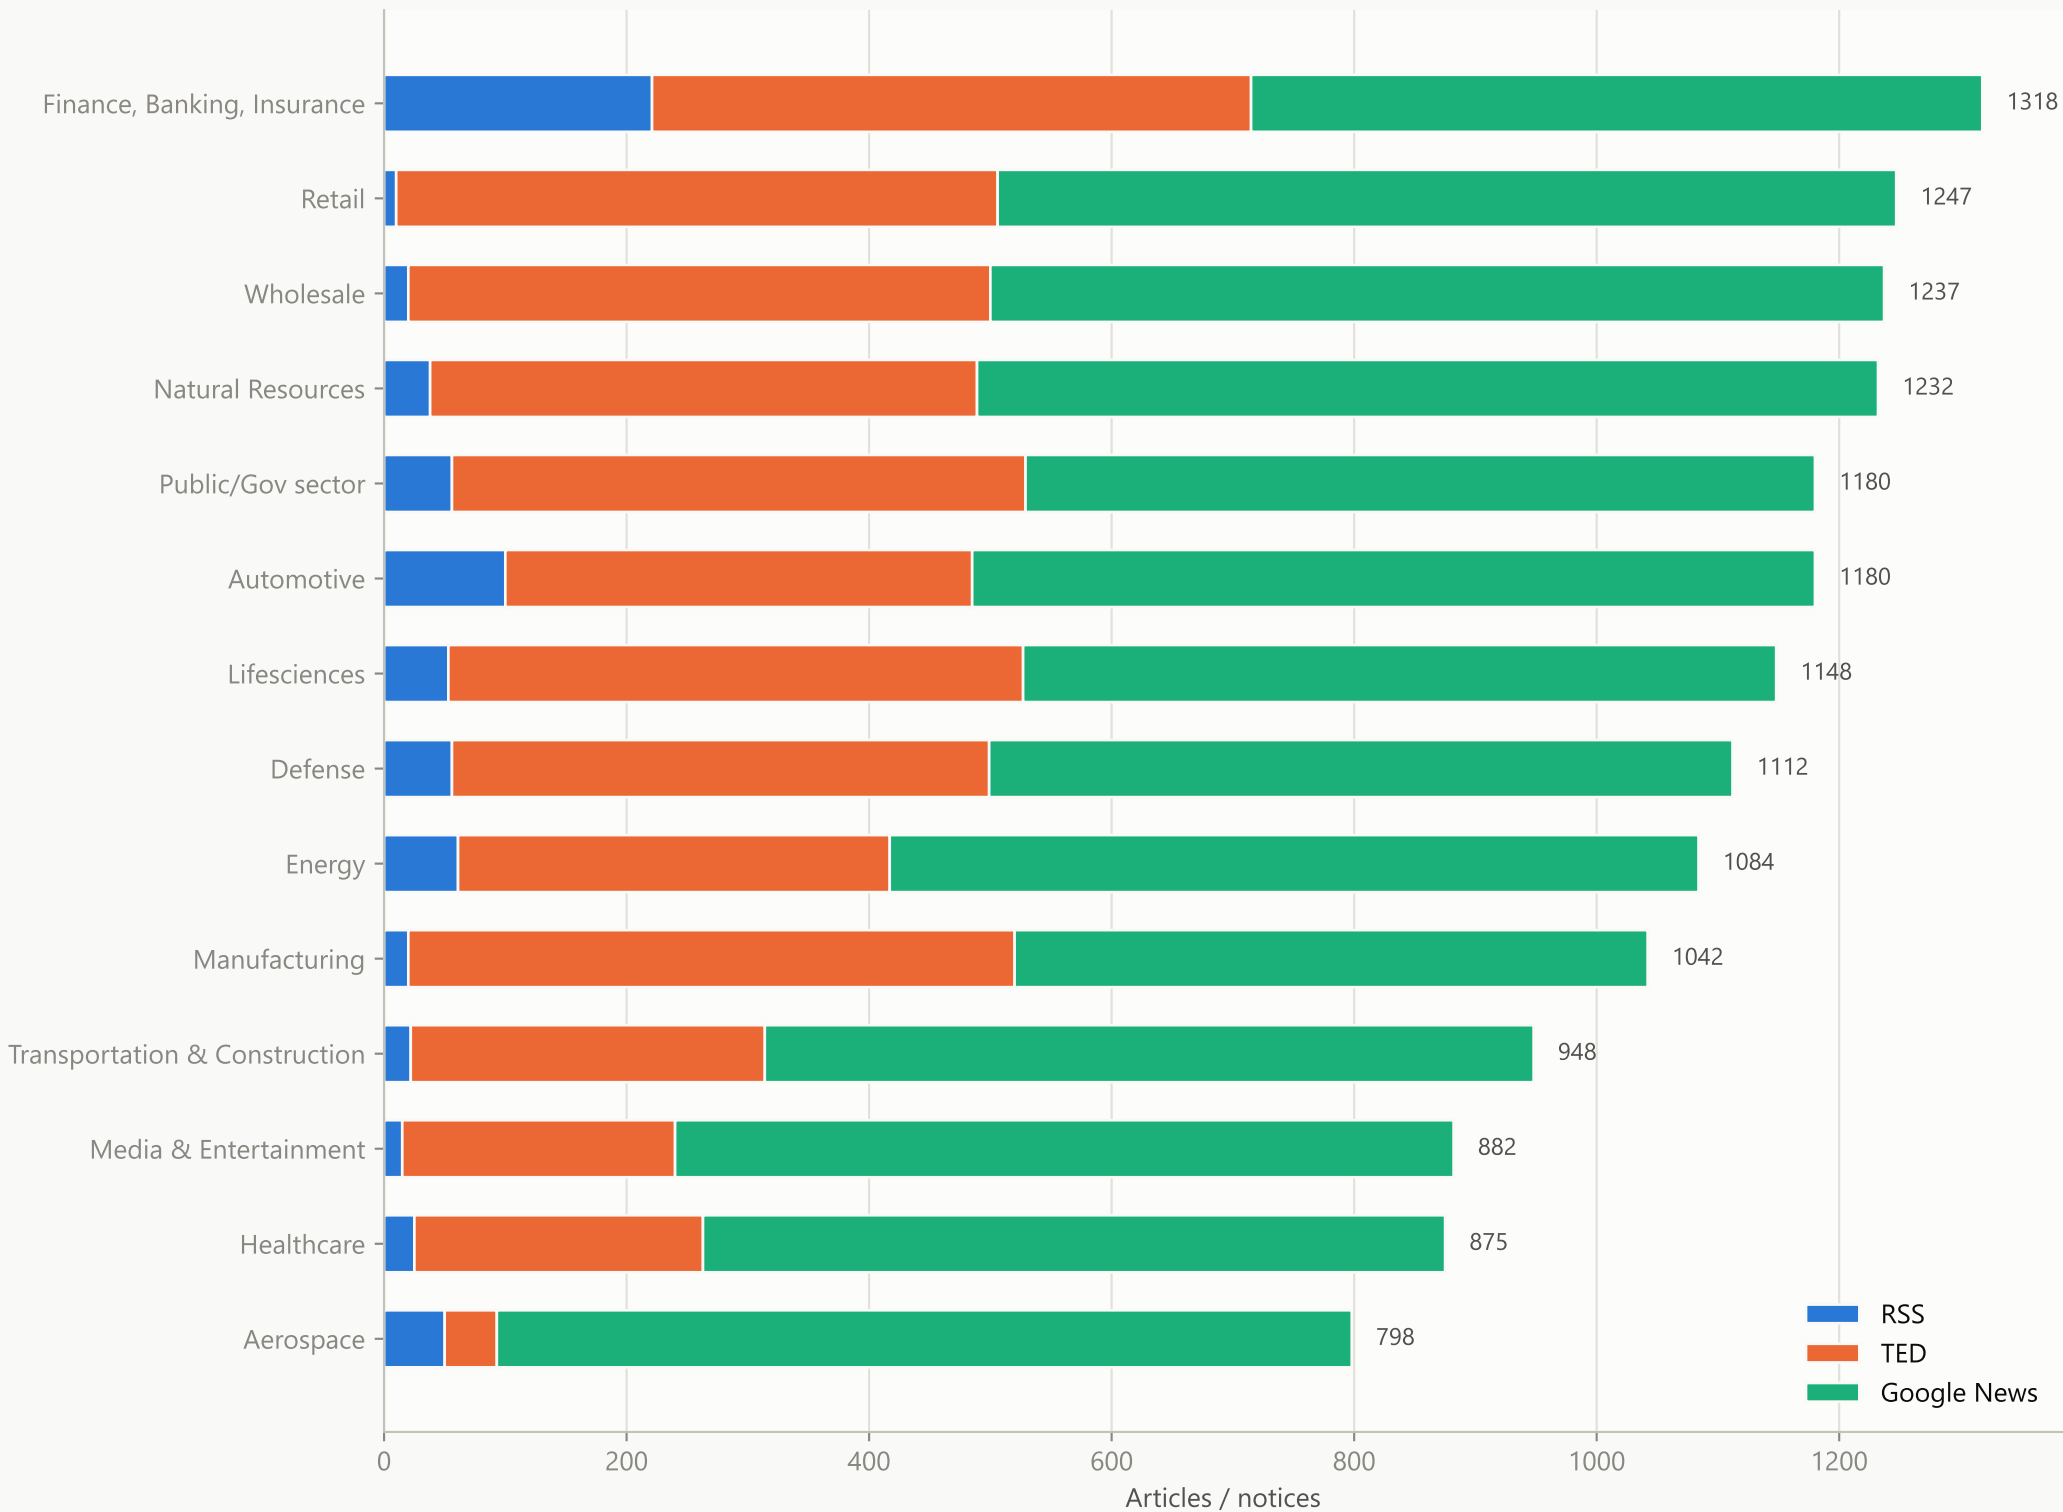

See `dark_corner.md` for verticals with thin RSS coverage, noisy/overlapping TED CPV matches, or gnews keyword-collision noise.

## Coverage by publication year

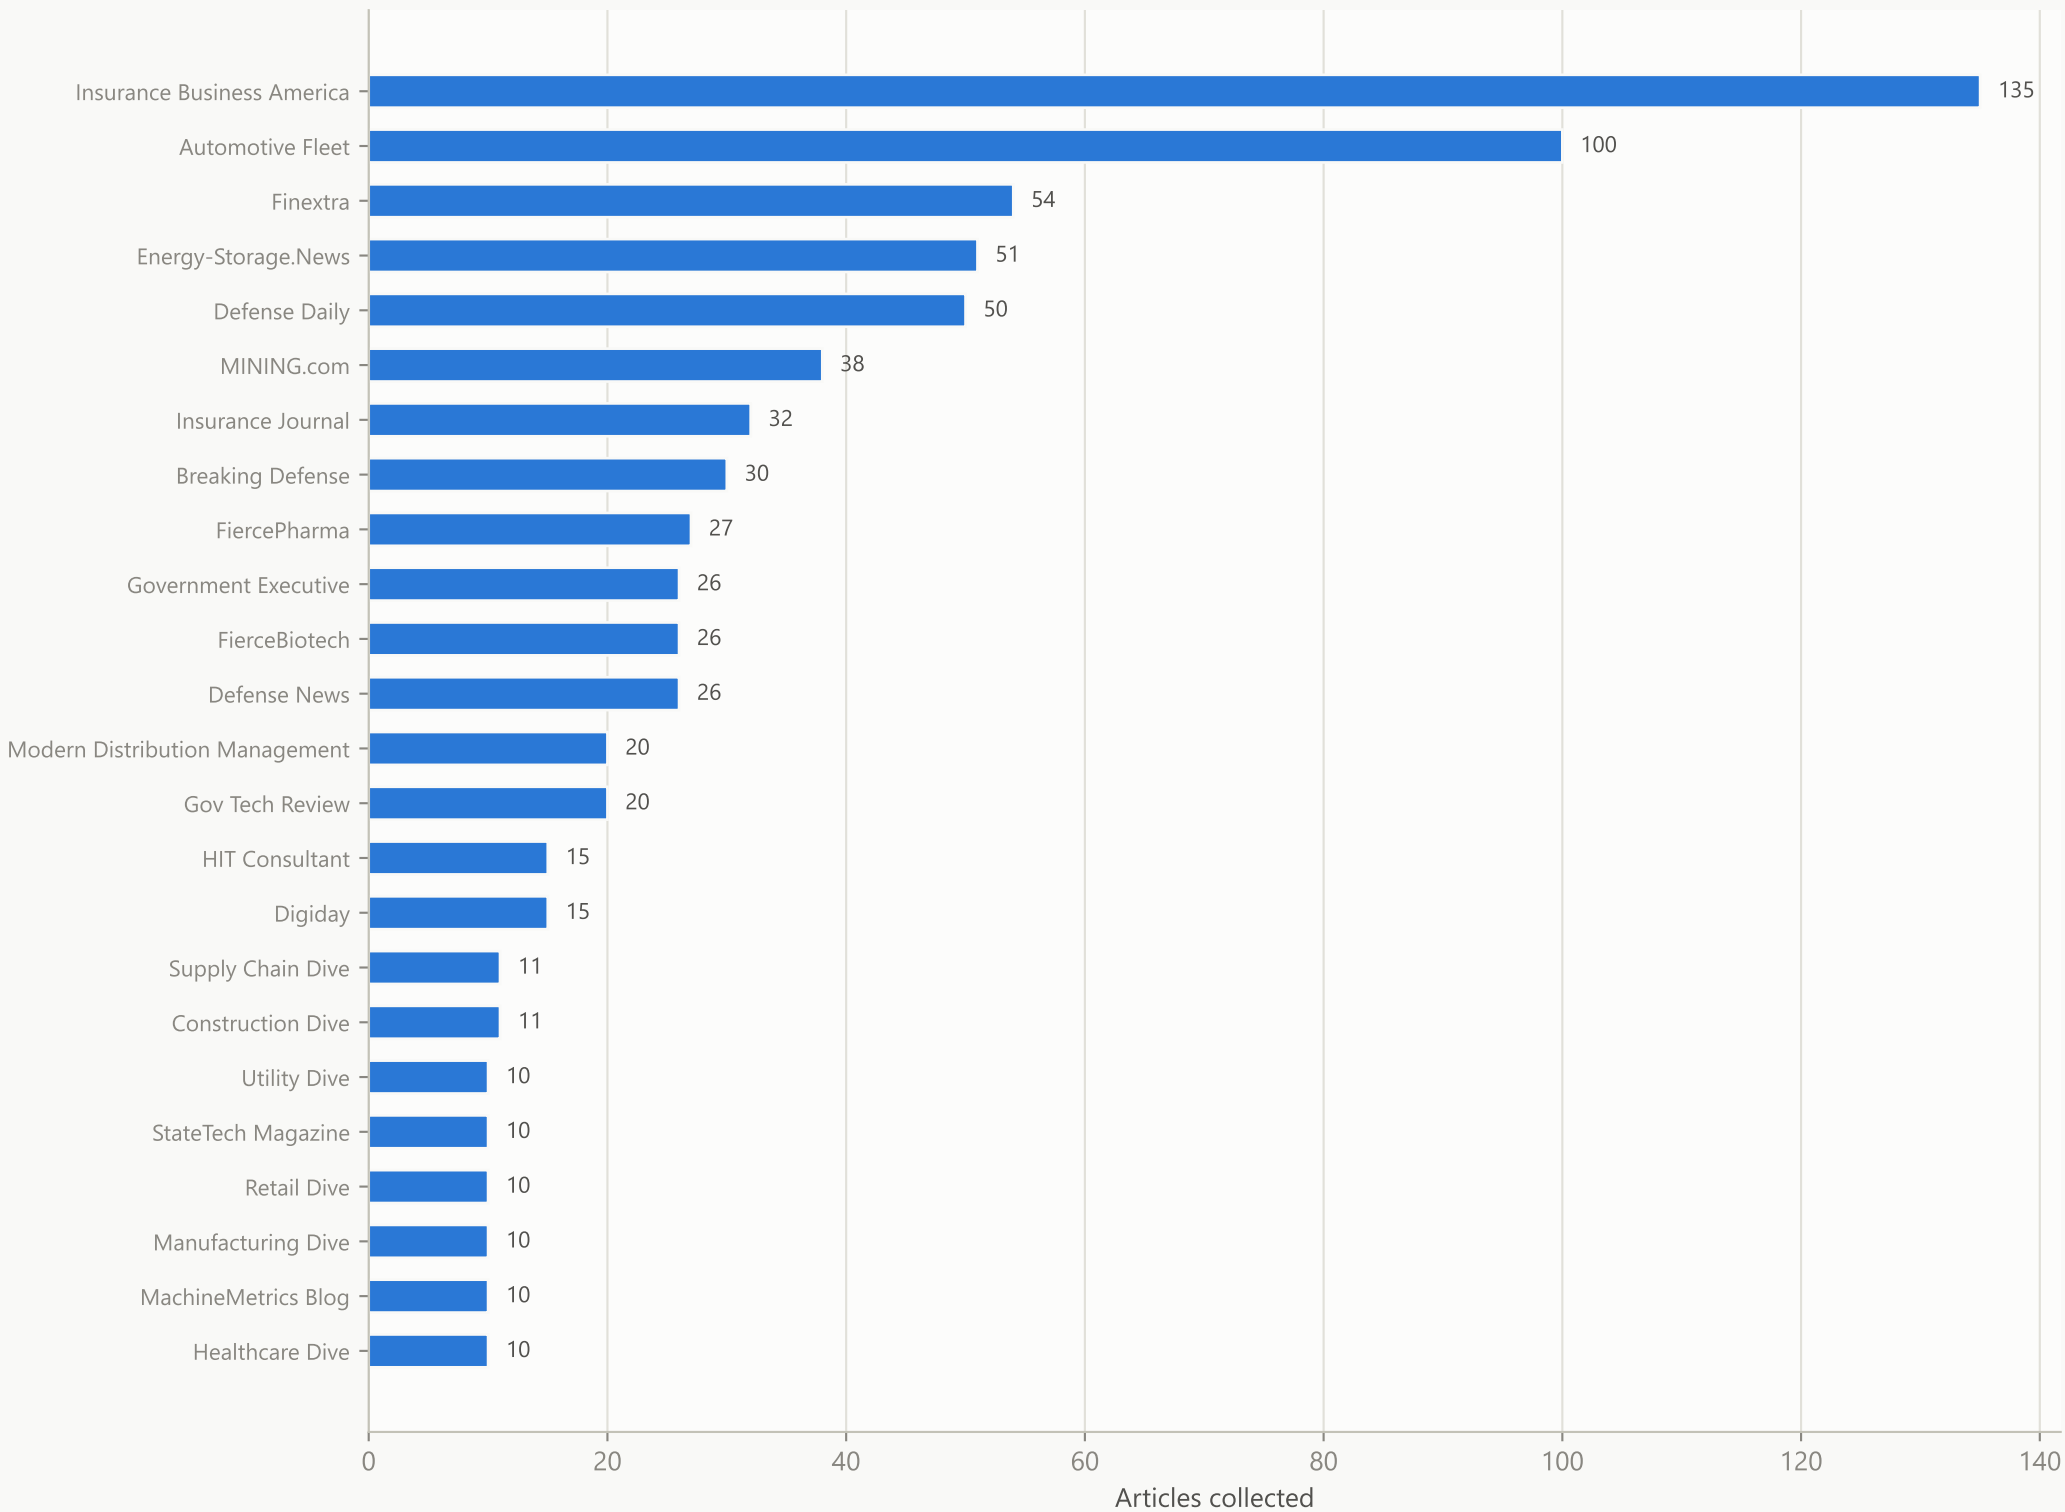

TED and Google News are deliberately spread across time bands per run (active/recent, ~1 year ago, ~5 years ago), not just the most recent notices — older columns are that historical sampling, not a coverage gap. RSS is inherently recency-only (feeds only carry current articles).

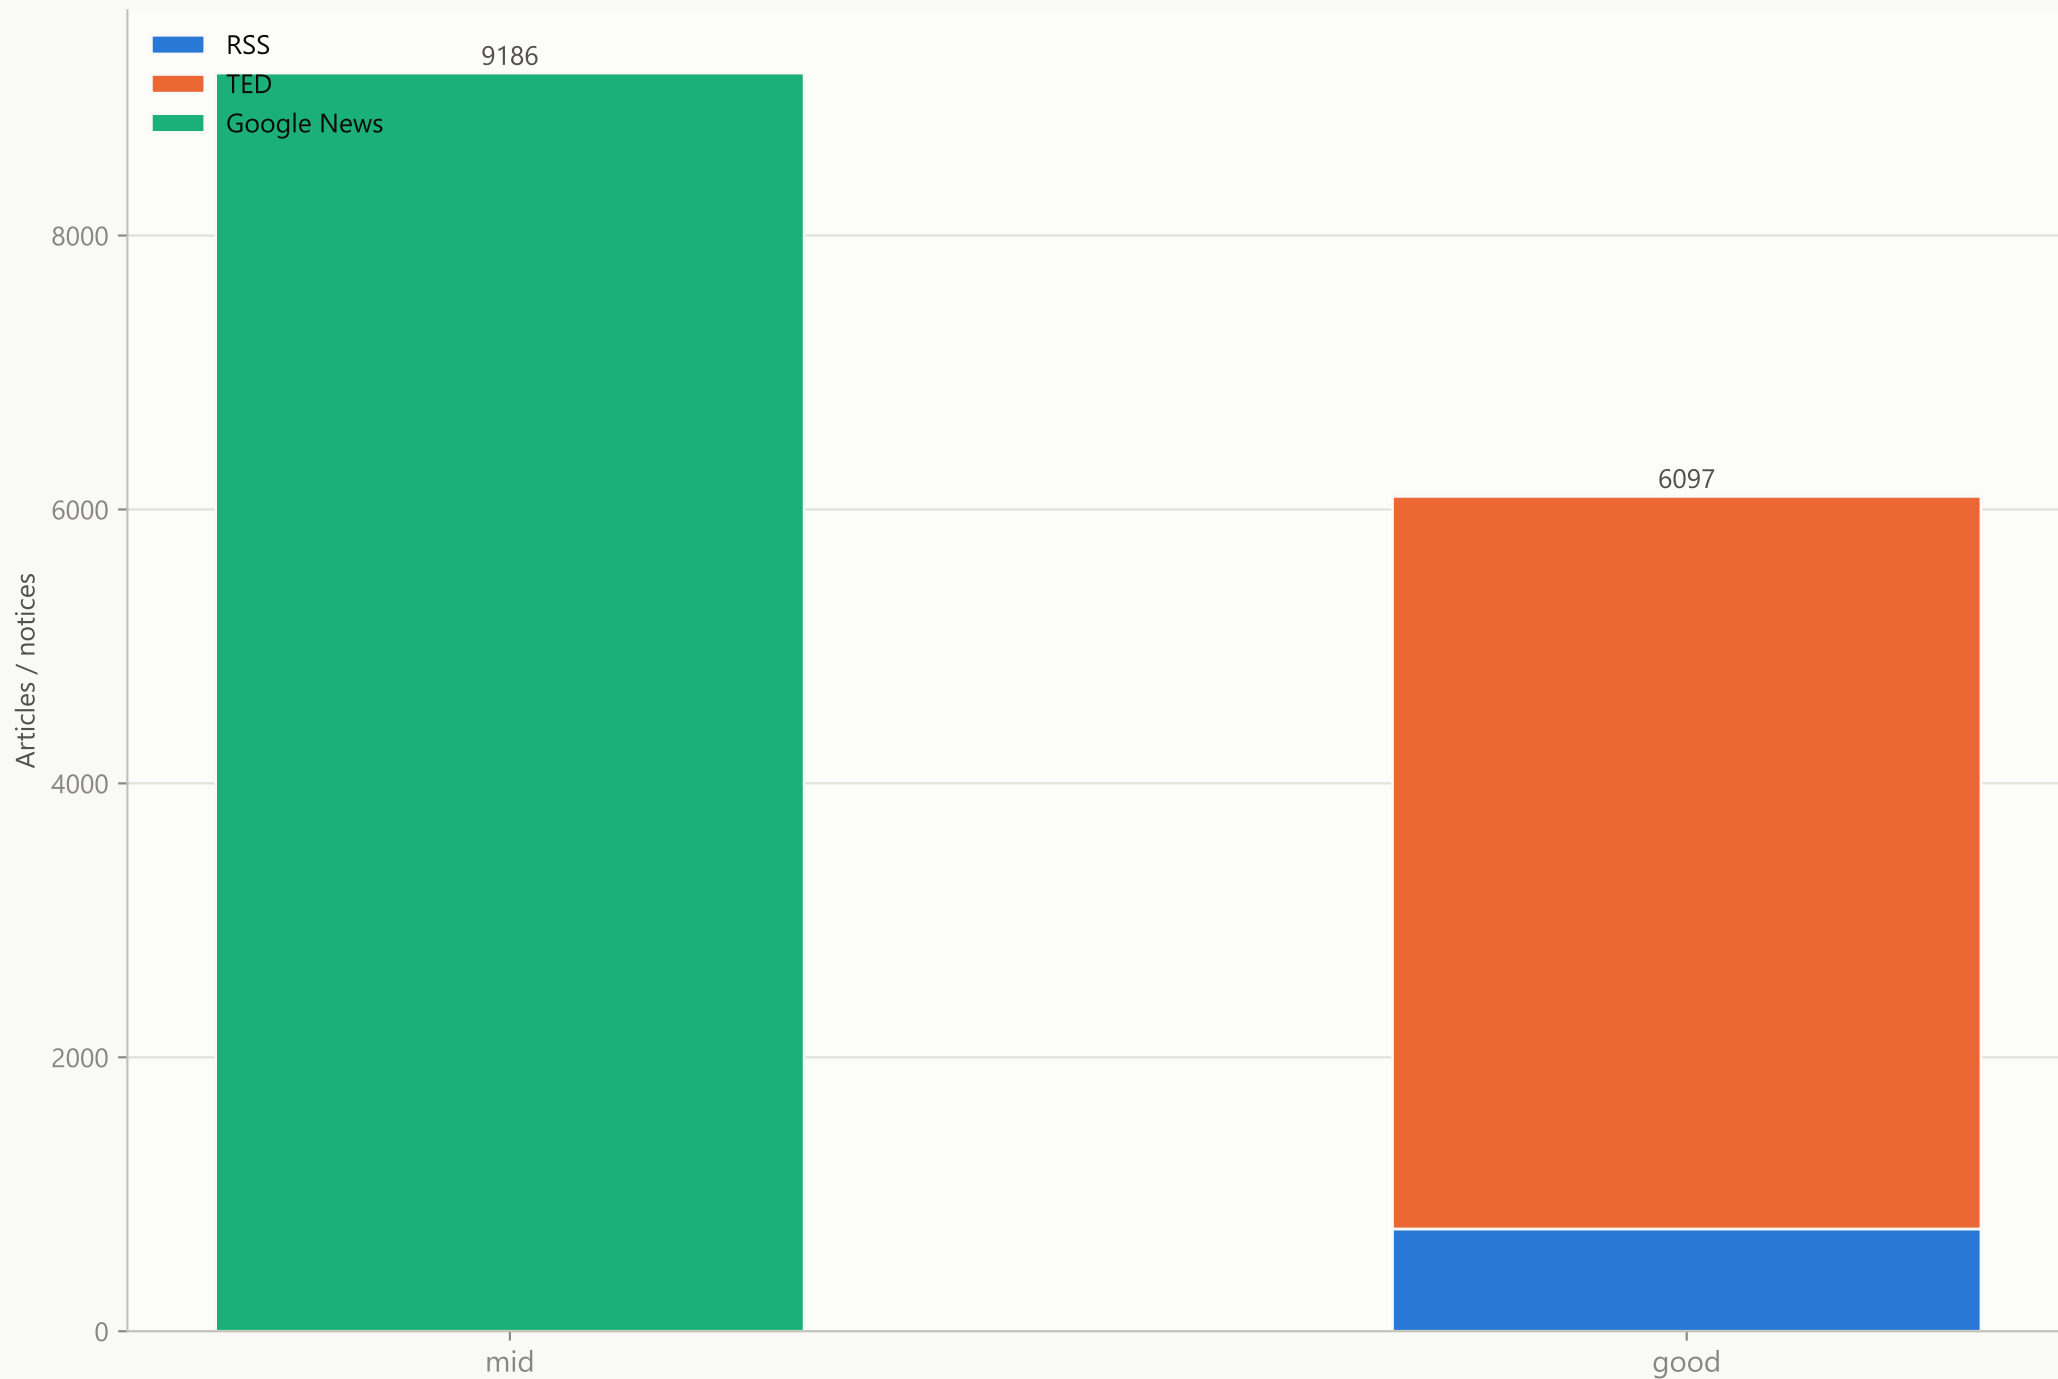

## Coverage by vertical

## RSS articles by feed

## Coverage by confidence

Confidence is now a flat per-source trust signal, not TED's old per-vertical CPV-quality score: RSS and TED are tagged "good", Google News is tagged "mid" (keyword-search noise, e.g. "wholesale" matching "wholesale inflation" articles — see [dark\\_corner.md](#)).
